WAN Optimization feature retirement notice

After careful review, Cisco Meraki has determined that the current WAN Optimization feature in the MX Security Appliance product line does not meet the quality standard that our customers and partners expect. Because of this, the decision has been made to phase out the WAN Optimization feature. This will allow the Cisco Meraki team to focus efforts on providing the best security platform in the industry for distributed networks.

Moving forward, VPN traffic optimization will be available via the IWAN feature set. More information regarding IWAN can be found at https://meraki.cisco.com/iwan.

When will WAN Optimization be removed from the MX feature set?
WAN Optimization will be phased out of the MX product line and the Cisco Meraki Dashboard by the end of calendar year 2015. In the interim, a banner highlighting the upcoming change will appear in the Meraki Dashboard for organizations that have WAN Optimization enabled.

What is the current Support policy regarding WAN Optimization?
No software improvements or bug fixes are planned for WAN Optimization. Customers or partners who contact Support regarding issues with WAN Optimization will be advised to disable the feature.
