MS220-8 Compact Series

1G compact access switch with 1G SFP uplinks, integrated power and optional PoE+

CLOUD MANAGED STACKABLE ACCESS SWITCHES

The Cisco Meraki MS220-8 series switches provide layer 2 access switching in a fanless, compact form factor with integrated power. All models include 1GbE SFP ports for fiber uplink, integrated mounting brackets and a Kensington security slot, making them ideal for rapid and secure deployment in small sites and carpeted areas.

Cisco Meraki switches are built from the ground up to be easy to manage without compromising any of the power and flexibility traditionally found in enterprise-class switches.

The Meraki MS is managed through an elegant, intuitive cloud interface, rather than through command line. To set up a Meraki switch, just plug it in; there's no need for complicated configuration files, or even direct physical access to the switch.

Meraki’s centralized management gives administrators deep visibility into the network and how it’s used. For example you can quickly see which switches are near capacity across hundreds of sites, or find all configuration changes made by a member of the team with instant search.

INDUSTRY LEADING CLOUD MANAGEMENT

Cloud management has a number of benefits that make it easier to build networks large and small:

• True zero-touch device provisioning
• Virtual stacking: manage up to thousands of ports from a single pane of glass.
• Application layer visibility with automatic operating system, client, and hostname fingerprinting.
• Powerful Live Tools such as packet capture and cable test to isolate and troubleshoot network issues.
• Alerts upon power loss, downtime, or configuration changes.
• Role-based administration and automatic, scheduled firmware upgrades over the web.
• Regular feature updates and enhancements delivered on demand from the Meraki cloud.

Product Highlights

• Gigabit Access switching with 8 x 1GbE RJ45 ports and optional PoE/PoE+
• 2 x 1G SFP uplink interfaces on all models
• Integrated power supply and fanless operation
• Non-blocking switch backplane with 20 Gbps bandwidth support
• 124 watt PoE budget with PoE+ support and dynamic power allocation for powering APs, phones, cameras, and other PoE-enabled devices
• 8 dedicated QoS queues for converged voice, video, and data applications
• Integrated mounting brackets for wall or desk mounting, with included Kensington security slot
• Lifetime hardware warranty and advanced replacement at no additional cost
Features

Meraki switches include all of the traditional Ethernet features found in modern enterprise access switches, including:

**Branch & Campus Access**
- Quality-of-Service (QoS) to prioritize mission critical traffic such as voice and video
- Voice VLAN support for simplified VoIP deployments
- CDP, LLDP advertisement and snooping, with detailed neighbor discovery and visibility
- Port Mirroring (SPAN) support for monitoring network traffic at line rate
- IGMP Snooping to optimize network performance for multicast applications
- Link Aggregation Control Protocol (LACP) for high-capacity trunking

**Network Security**
- IEEE 802.1X, MAB, and Hybrid authentication support for wired access control with RADIUS server monitoring
- Port security and MAC whitelisting
- Change of Authorization (CoA) and RADIUS accounting support
- DHCP snooping to prevent users from adding unauthorized DHCP servers on the network
- Rapid spanning tree, BPDU guard, root guard, and other safeguards to help prevent misconfigurations and reduce convergence time
- Per port VLAN configuration
- Multiple administrative roles with sophisticated security policy management

**Network Troubleshooting & Automation**
- Virtual Stacking lets administrators manage up to thousands of ports in a single interface without having to physically connect stack members
- Configuration templates for rapid, zero-touch provisioning and auditing of all sites
- Network Topology for automatic and interactive network mapping
- Remote cable testing, packet capture and client discovery
- Automatic and scheduled firmware upgrades for the complete network

**Rapid Deployment & Configuration**
With Meraki’s secure cloud architecture, device provisioning and orchestration becomes completely streamlined. Zero-touch configuration coupled with configuration templates let administrators define a switch configuration once and then bind thousands of switches to a profile, reducing overhead and increasing network security.

**Application Layer Visibility**
Meraki is the only switch to include integrated Layer 7 fingerprinting. Our powerful, built-in traffic classification features can identify hundreds of applications from business apps to BitTorrent and YouTube. User fingerprinting with Google-like search allows administrators to easily identify and control individual users, PCs, iMacs, iPads, Android, and other device types. This unprecedented visibility allows optimizing of network resources and maintaining an optimal, secure network that always performs.

**Unified Software Architecture**
Meraki switches run the same Meraki operating system used by all of Meraki’s products. The use of a common operating system allows Meraki to deliver a consistent experience across all product lines. When connected, MS220-8 switches automatically connect to the Meraki cloud, download configuration, and join the appropriate network. If new firmware is required, this is retrieved by the switch and updated automatically. This ensures the network is kept up-to-date with bug fixes, security updates, and new features.

Select a tool: [Cable test]

**Warning:** This test will disrupt traffic to 100 or 10 Mbit devices.

Remote cable test in the Meraki Dashboard
Simplified Management and Operations

Meraki’s cloud managed architecture makes it simpler than ever to quickly provision and reconfigure switch ports with security, QoS, and other parameters. The Meraki dashboard provides unified policies, event logs, and monitoring, which make it easy to manage and grow large network deployments.

By providing a complete, powerful set of management functions over the web, Meraki’s cloud-based management eliminates the need for proprietary command line configuration interfaces which require expensive and time consuming certifications. Meraki MS switches can be fully deployed and provisioned in minutes, without requiring any local configuration or staging. Additional or replacement switches can be sent to remote offices and installed by non-technical staff, saving thousands of dollars in time and travel expenses.

The Meraki MS family also includes several remote diagnostic features, from network connectivity and cable integrity tests to latency measurement tools. For deep client troubleshooting, administrators can even perform per-port remote packet captures without any additional probes or hardware on site.

Designed for Reliability & Environmental Efficiency

The Meraki switch family was designed for reliable, long-lived operation in wiring closet environments, which may be prone to high temperatures and limited ventilation. By minimizing total component count and only using proven switching silicon, Meraki is able to deliver highly reliable products with exceptional mean time between failure (MTBF) ratings.

Each Meraki switch also operates with a split-plane architecture, where silicon-based switching and data forwarding are separated from software-based control and management. By decoupling the underlying switching logic from control, each unit is able to deliver wire-speed switching even when advanced software features such as Layer 7 host and OS fingerprinting are enabled.

Finally, the highly integrated designs of Meraki switches result in power and cooling savings in large deployment environments of 30-60% when compared with similar managed Gigabit switches.

DISTRIBUTED BRANCES & REMOTE SITES

Meraki’s cloud-based system makes it easy to manage a single switch, or thousands of distributed switches, from a single interface.

- Troubleshoot problems remotely, e.g., find which port has a bad cable attached.
- Add or replace switches without having to send a technician onsite. Switches automatically download their current configuration as soon as they are connected to the network.
- Receive email alerts or SMS messages whenever there’s a problem at a remote site.

CAMPUS EDGE

MS switches are ideal for small and large scale campus deployments, where reliability, scalability, and managability are top priorities.

- Virtual Stacking lets administrators manage up to thousands of ports in a single interface without having to physically connect stack members.
- SFP uplinks with link aggregation provide high speed connectivity to the core of the network
- Receive alerts if any switch loses connectivity, before users complain.
Dimensions & Interfaces

The Meraki MS220-8 series also supports SFP pluggable optics for high-speed fiber connectivity. Meraki offers a variety of Gigabit and 10 Gigabit accessories. Full specifications and compatibility information is available in the Meraki Accessories datasheet: https://meraki.cisco.com/lib/pdf/meraki_datasheet_sfp.pdf
Specifications

Management
Managed via the Web with the Meraki cloud management platform
Integrated with Meraki Wireless and complete portfolio of IT products and solutions
Zero-touch remote provisioning (no staging needed)
Detailed historical per-port and per-client usage statistics
DHCP, client, and hostname fingerprinting
SNMPd and SYSLOG support for integration with other network management solutions
Automatic firmware upgrades with scheduling control

Remote Diagnostics
Email, SMS and Mobile push notification alerts
Cable testing and link failure detection with alerting
Live remote packet capture
Dynamic and interactive network discovery and topology
Combined event and configuration change logs with instant search

Stacking
Virtual stacking supports thousands of switch ports in a single logical stack for unified management, monitoring, and configuration

Ethernet Switching Capabilities
802.1p Quality of Service, 8 queues and configurable DSCP to CoS mapping
802.1Q VLAN and trunking support for up to 4,095 VLANs
802.1w, 802.1D Rapid Spanning Tree Protocol (RSTP, STP)
Broadcast storm control
802.1ab Link Layer Discovery Protocol (LLDP) and Cisco Discovery Protocol (CDP)
802.3ad Link aggregation with up to 8 ports per aggregate, Multichassis aggregates supported on stacked switches
Port mirroring
MAC forwarding entries: 8,000

Security
Integrated two-factor authentication for Dashboard management
Role-based access control (RBAC) with granular device and configuration control
SSO, Corporate wide password policy enforcement
IEEE 802.1X RADIUS, hybrid authentication and RADIUS server testing
MAC-based RADIUS authentication (MAB)
Port security: Sticky MAC, MAC whitelisting
DHCP snooping, detection and blocking
STP Enhancements include BPDU guard, Root guard
IPv4 ACLs

Performance
Switching capacity: 20Gbps
Forwarding rate: 14.88mpps with standard packet size
Jumbo frame support (9600 byte Ethernet frame)
Flow control support

Power
Power input: 100 - 240 VAC, 47-63 Hz
Power consumption: 5 - 149W
Integrated power supply

Mounting
Wall or utility board mountable with included mount hardware
Desktop-mountable with included feet
Kensington lock slot included

Environment
Operating temperature: 32 °F to 104 °F (0 °C to 40 °C), 45 °C
Humidity: 5 to 95% non-condensing
Fanless operation

Regulatory
CSA-US (US, Canada)
FCC (USA)
IC (Canada)
CE (Europe)
RCM (Australia/New Zealand)
RoHS

Warranty
Full lifetime hardware warranty with next-day advanced replacement included
