

IoT FOR K-12

Future-Proof Your School's Safety with Meraki IoT

MV smart cameras and MT sensors power forward-thinking safety and security in and outside the classroom.

Create healthy environments for learning

Keep an eye on temperature, air quality, and classroom occupancy to maintain an optimal learning environment for students. Meraki sensors and smart cameras integrate seamlessly with your network to give you the visibility, flexibility, and control you need.

Restrict access to sensitive areas

Keep tabs on the rooms that should only be accessed by authorized personnel and comply with safety regulations. Meraki sensors help monitor door open/close and alert on activity in restricted areas. Easily get insight into who has accessed these spaces with the help of Meraki MV smart cameras to mitigate unwanted behaviors.

Maintain control of footage

Create rules that give access strictly based on security function with role-based access control. Manage and review any exports or shares within your network with access/activity logs from all devices. Rest easy knowing your footage is safe from unauthorized access with full disk encryption on the MV smart cameras.

Safety first, always

Maintain a positive in-person learning environment by resolving issues quickly.

Remotely access the Meraki dashboard and the dedicated viewing portal to maintain full visibility on school grounds. Stay on top of potential issues with alerts that can be easily investigated with Meraki.

Get help fast, without compromise

Securely share live video with first responders on any device so they can get the information they need to quickly act.

Live video can be easily shared to any device, no software or log-ins required. Access automatically expires in 24 hours and can be revoked at any time to protect student privacy.
