

A SUSTAINABILITY CHECKLIST

Starting Your Journey Toward Sustainability

Incorporating sustainable practices doesn't need to be a daunting task—and can pay off in more ways than one.

Is your organization ready for a more sustainable future?

Free to be cool

Incorporate an economizer and free cooling to [reduce cooling costs by 60%](#)

Not just a bunch of hot air

Prevent hot exhaust air from mixing with the cold supply air to efficiently keep your spaces cool

A little more heat for a payoff

Every 1 °F increase in temperature can save 4-5% in energy costs

Automation is key

Use temperature and humidity data to automate and optimize cooling infrastructure

Airflow + optimization

Use psychrometric charts to identify hot spots or opportunities to optimize temperature

It's all about that P-U-E

Lowering PUE will reduce energy consumption and associated carbon emissions
